Aemetis Signs Agreement with Qantas to Supply 35 Million Gallons of Sustainable Aviation Fuel

Fuel to be delivered to San Francisco International Airport

CUPERTINO, CA – March 15, 2022 – Aemetis, Inc. (NASDAQ: AMTX), a renewable fuels company focused on negative carbon intensity products, announced today that an offtake agreement has been signed with Qantas Group and Qantas Airlines (“Qantas”) for 35 million gallons of blended sustainable aviation fuel (“SAF”) to be delivered over the 7 year term of the agreement. The value of the contract including incentives is approximately $250 million.

Sustainable aviation fuel provides significant environmental benefits compared to petroleum jet fuel, including a lower lifecycle carbon footprint and reduced contrails. The blended sustainable aviation fuel to be supplied under this agreement is 40% SAF and 60% Petroleum Jet A to meet international blending standards.

This supply agreement with Aemetis builds on Qantas’s expanding effort for a future of net zero emissions by 2050.

“Climate change is front of mind for Qantas, our customers, employees and investors, and it is a key focus for us as we move through our recovery from the pandemic,” Qantas Group CEO Alan Joyce said. “Operating our aircraft with sustainable aviation fuel is the single biggest thing we can do to directly reduce our emissions.”

The sustainable aviation fuel is expected to be produced by the Aemetis renewable jet/diesel plant under development on a 125 acre former U.S. Army Ammunition production plant site in Riverbank, California. The blended sustainable aviation fuel is scheduled to begin deliveries to Qantas in 2025.

“The use of sustainable aviation fuel by Qantas is another step toward lowering the environmental impact of aviation,” stated Eric McAfee, Chairman and CEO of Aemetis. “Our supply of SAF to the San Francisco International Airport is supported by the California Low Carbon Fuel Standard, creating new investment and jobs in disadvantaged minority communities in the state.”
Powered by 100% renewable electricity, the Aemetis Carbon Zero production plant at the Riverbank plant site is designed to sequester CO2 from the production process using injection wells, significantly reducing the carbon intensity of the renewable fuel.

**About Aemetis**

Aemetis has a mission to transform renewable energy with below zero carbon intensity transportation fuels. Aemetis has launched the Carbon Zero production process to decarbonize the transportation sector using today’s infrastructure.

Aemetis Carbon Zero products include zero carbon fuels that can “drop in” to be used in airplane, truck, and ship fleets. Aemetis low-carbon fuels have substantially reduced carbon intensity compared to standard petroleum fossil-based fuels across their lifecycle.

Headquartered in Cupertino, California, Aemetis is a renewable natural gas, renewable fuel and biochemicals company focused on the acquisition, development and commercialization of innovative technologies that replace petroleum-based products and reduce greenhouse gas emissions. Founded in 2006, Aemetis has completed Phase 1 and is expanding a California biogas digester network and pipeline system to convert dairy waste gas into Renewable Natural Gas. Aemetis owns and operates a 65 million gallon per year ethanol production facility in California's Central Valley near Modesto that supplies about 80 dairies with animal feed. Aemetis also owns and operates a 50 million gallon per year production facility on the East Coast of India producing high quality distilled biodiesel and refined glycerin for customers in India and Europe. Aemetis is developing the Carbon Zero sustainable aviation fuel (SAF) and renewable diesel fuel biorefineries in California to utilize distillers corn oil and other renewable oils to produce low carbon intensity renewable jet and diesel fuel using cellulosic hydrogen from waste orchard and forest wood, while pre-extracting cellulosic sugars from the waste wood to be processed into high value cellulosic ethanol at the Keyes plant. Aemetis holds a portfolio of patents and exclusive technology licenses to produce renewable fuels and biochemicals.
